Professional Summary

Software Engineer with 2+ years at TransUnion building AI-assisted platforms, Apache Spark data pipelines, and backend systems for fintech production environments. Specialized in **Generative AI**, LLM-assisted diagnostics, **Agentic AI** workflows, Java migration systems, and production-grade cloud platforms. Currently pursuing AI Engineering on Cloud & AIOps from IIT Roorkee.

Technical Skills

Generative AI & ML: LLMs, RAG, Prompt Engineering, Prompt Optimization, Agentic Workflows, AI Agents, LLMOps, AI Evaluation, Vector Search, Semantic Search
AI Frameworks: LangGraph, LangChain, CrewAI, LlamaIndex, Hugging Face, OpenAI, Gemini
Programming Languages: Python, Java, SQL, JavaScript, TypeScript
Backend Engineering: Spring Boot, FastAPI, REST APIs, Microservices
Data Engineering: Apache Spark, PySpark, Kafka, Parquet, JSON Processing
Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Jenkins, Terraform, Airflow, CI/CD, Git
Databases & MLOps: PostgreSQL, ChromaDB, Vector Databases, Model Serving, MLOps

Work Experience

TransUnion Pune, India
Associate Software Engineer *Jun 2024 – Present*

- Architected **PRISM**, an **LLM-assisted** PySpark diagnostics platform using Agentic AI workflows and Prompt Engineering, reducing Spark job failure triage time by **40%** across production data pipelines.
- Designed a schema-aware **Apache Spark** diff engine to validate **6,000+** financial asset files using field-level comparison and configurable tolerance rules, eliminating manual QA effort.
- Migrated **65 of 140** legacy C-based business rules to **Java** with JUnit coverage and CI/CD integration, increasing rule migration velocity by **50%**.
- Built parser and execution scaffolds for rule engines processing Parquet/JSON datasets at production scale, enabling automated validation across fintech data pipelines.

Analyst Intern *Feb 2024 – Jun 2024*

- Stabilized the Model Execution Service build by diagnosing log anomalies and resolving critical vulnerabilities within the first sprint.
- Authored JUnit test suites achieving **100%** code coverage for model-repository classes and validated REST API endpoints across dev, staging, and pre-production environments.

Projects

FinForensics | *LangGraph, LangChain, Llama 3, FastAPI, Streamlit, Docker* 2026

- Architected a multi-agent **Generative AI** system using **LangGraph** to investigate payment transaction failures, identify root causes, and reduce diagnosis time from **45 min to under 30 seconds**.
- Designed a 4-agent pipeline with conditional routing and human-in-the-loop review, achieving **89%** classification accuracy for systemic vs isolated failures.

PRISM | *Python, PySpark, LLMs, Prompt Engineering* 2025

- Extended internal PySpark diagnostics into a unified LLM-assisted platform for schema validation and production debugging.

CreditScore Simulator | *Vue.js, Spring Boot, Java, REST APIs, H2* 2025

- Built a full-stack credit score simulation tool with Vue.js and Spring Boot for internal product demos.

Education

Indian Institute of Technology, Roorkee Roorkee, India
PGCP in AI Engineering on Cloud and AIOps *Nov 2025 – Oct 2026*

Vishwakarma Institute of Information Technology Pune, India
Bachelor of Technology in Computer Engineering; GPA: 9.4/10 *Nov 2021 – Jun 2024*

Government Polytechnic Pune Pune, India
Diploma in Computer Engineering; 96.47% *Jun 2018 – Jun 2021*

Certifications & Patents

Google Cloud – Generative AI Leader, Oct 2025
Patent Granted, South Africa – IoT Simulation & Cloud Integration, ID: 2023/03129

Achievements

Best Q4 2024 Performer – TransUnion | **Best Outgoing Student, Batch 2024** – VIIT, Pune
Mentor, topmate.io – Backend Java, interview prep (Jan 2025 – Present)
